EDUCATION

Bachelor of Technology (B.Tech.) in Computer Science | CGPA: 8.75/ 10
Koneru lakshmaiah Education Foundation | Vijayawada, India 04/2020 - 05/2024

Intermediate (MPC) | CGPA: 8.62/ 10
Sri Chaitanya Junior College | Srikakulam, India 05/2018 - 03/2020

Secondary School (10th Class) | CGPA: 9.5/ 10
Sri Chaitanya College | Srikakulam, India 04/2016 - 04/2018

WORK EXPERIENCE

Cognizant Technology Solutions 04/2025 - Present
Multicloud Engineer – CIS Division

- Managed and supported multicloud infrastructure across Azure and AWS, working with services such as EC2, VMs, VPC, S3, IAM, RDS, and storage services to ensure system availability, scalability, and reliability.
- Administered Linux/Unix-based systems, performing system monitoring, configuration management, and troubleshooting to maintain stable cloud environments.
- Implemented Infrastructure as Code (IaC) using Terraform to provision and manage cloud resources with version-controlled deployments.
- Deployed and managed containerized applications using Docker and Kubernetes (EKS) across cloud environments.
- Developed automation scripts using Python, Bash, and PowerShell to perform server health checks, job scheduling, and operational automation.
- Built and maintained CI/CD pipelines using GitHub Actions and Jenkins, enabling automated testing, build, and deployment across development and production environments.
- Configured cloud networking and security controls including VPCs, security groups, IAM policies, encryption, and least-privilege access to maintain secure cloud operations.
- Monitored and optimized system performance and reliability using CloudWatch, Prometheus, Grafana, SolarWinds, and SCOM, while supporting Major Incident Management (MIM) and ITIL-based Incident and Problem Management processes through ServiceNow, including incident triage and root-cause analysis.
- Managed virtualized environments using VMware vCenter, XenCenter, and cluster management tools, supporting scalable and resilient infrastructure.

Rashtriya Ispat Nigam Limited (Vizag Steel Plant) 05/2022 - 07/2022
Database Management Intern

- Developed and optimized 50+ SQL queries, stored procedures, and triggers in Oracle and SQL Server, improving query performance and reporting speed by 25% through indexing and database optimization..
- Supported database backup, recovery, and disaster recovery operations by validating restore procedures, ensuring 100% data integrity and high availability of enterprise databases.
- Worked in Linux/Unix environments to perform database administration, execute SQL and shell scripts, troubleshoot database connectivity and server performance issues, and support daily operational activities
- Collaborated with cross-functional infrastructure and application teams to resolve database and system performance issues, reducing downtime by 30%, while documenting administration workflows and troubleshooting guides to improve operational efficiency and knowledge sharing by 40%.

TECHNICAL SKILLS

Programming & Database: Python, C, C++, Java, Linux/ Unix, SQL, HTML5, CSS, MongoDB, Cassandra, MySQL, Oracle, PostgreSQL

Web Technologies: React.js, HTML/CSS, JavaScript, PHP, Node.js, jQuery, Bootstrap, TypeScript

Frameworks & Tools: Flask, Azure, Bootstrap, Git, AWS, Google Cloud Platform, JIRA, Salesforce, PowerBI, Statistics, PyTorch, TensorFlow, Keras, Tableau, scikit-learn, Google Analytics, Hadoop, Spark, Matlab, Agile, SAS, Jenkins, Postman, Eclipse, Terraform, Docker, Kubernetes, GitHub Actions, Linux/Unix administration

PROJECTS

Frontica – Aker Solutions| Oslo, Norway | Tools & Technologies: Azure Cloud, VMware, Cisco Catalyst/Nexus, PowerShell, ServiceNow, SolarWinds Orion, BizTalk, SCOM, BMC Remedy

–A Supported enterprise-scale Azure cloud and on-premises data center operations for Aker Solutions, managing virtual machines, cloud infrastructure, and Cisco Catalyst 9300/9500 and Nexus 7K network environments to ensure high availability, scalability, and business continuity. Automated infrastructure monitoring and operational workflows using PowerShell, reducing manual effort and improving incident response while collaborating with cross-functional teams to troubleshoot production issues and optimize system performance. Monitored infrastructure health using SolarWinds Orion, SCOM, and ServiceNow, maintaining 99.9% system uptime for business-critical applications. Assisted in integrating BizTalk and VMware environments, performed root cause analysis, implemented proactive maintenance, and documented operational procedures to improve infrastructure reliability, operational efficiency, and DevOps collaboration.

OmniKube | [Github](#) | Tools & Technologies: Kubernetes, Docker, Helm, Terraform, GitHub Actions, Jenkins, Linux, Bash, YAML, Prometheus, Grafana, AWS/Azure.

–Developed OmniKube, a cloud-native Kubernetes platform for deploying and managing containerized microservices using Docker and Kubernetes. Automated infrastructure provisioning with Terraform (IaC) and implemented CI/CD pipelines using GitHub Actions/Jenkins to streamline application build, testing, and deployment. Configured Deployments, Services, Ingress, ConfigMaps, Secrets, and Helm charts to support scalable, highly available, and production-ready workloads. Integrated Prometheus and Grafana for real-time monitoring, metrics collection, and alerting to improve application reliability and cluster health. Applied RBAC, secrets management, and Linux/Bash automation to enhance security and operational efficiency while following DevOps best practices, including version control, infrastructure automation, and continuous delivery.

CERTIFICATIONS

AWS Certified Cloud Practitioner

Microsoft Certified: Azure Fundamentals

Microsoft Certified: Azure Developer Associate
